MICROSOFT CLOUD SECURITY ASSESSMENT

Secure your Microsoft 365 and Azure deployments and reduce the risk of data breach

Misconfiguring your Microsoft 365 and Azure controls can introduce significant risk to your organisation. Our consultants will assess your Microsoft 365 and Azure build foundations against industry best practice guidelines, and will deliver a risk treatment plan to help prioritise your cyber security focus areas now.

According to statistics from the Information Commissioner's Office (ICO), human error caused 90% of data breaches in 2019. Our Microsoft Cloud Security Assessment will enable your organisation to:

Assess your Microsoft 365 and Azure deployments against CIS Benchmarks guidelines

Identify misconfigurations and policy and governance gaps across your Microsoft 365 and Azure deployments

Establish a stronger security posture that leverages Microsoft cloud tools and best practices

Build in consistency and security to deliver value from your investment

Safeguard Your Operational Integrity

We apply zero trust principles to your Microsoft 365 and Azure foundations to elevate your security posture:

- Identity and Access Management
- Governance
- Networking
- Security Center Configurations
- Audit and Monitoring

The risk treatment plan will prioritise actions to remediate any misconfigurations, with a focus on combining quick wins with longer-term actions that will safeguard your operational integrity in the evolving digital landscape.
