

# CENTRAL GOVERNMENT SOLUTIONS

Central Government departments face the continuing challenges of running critical national infrastructure whilst keeping systems and data secure from increasing global cyber threats.

Regardless of where they are on their digital transformation journeys, all Central Government departments have the same goal: to deliver the best possible services to citizens with the best value for the public spend.

How can your Central Government department deliver critical national infrastructure and offer digital services to citizens while freeing up time and resource to go back into frontline services, keeping citizen data secure at all times?

“GDS chose Six Degrees to help with... [setting] up a secure remote connection to the PSN... Since migrating, GDS saves up to £42,000 per year in PSN connection costs.”  
– Government Digital Service

## Enable multi-agency collaboration

Enable departments to communicate and collaborate to provide joined up and effective services to citizens.

- Implement communication and collaboration channels to enable frictionless meetings, file sharing, calls and communication and potential cost savings.
- Harness shared data and connected devices ethically and securely, enabling you to share data across departments and helping you coordinate citizen services, enabling safety across law enforcement and driving reductions in tax evasion.
- Ensure your people have access to the right tools, when and where they need them, by delivering optimal uptime, performance and availability for their key applications.

## Digitally transform citizen services

Deliver digital services that citizens use daily. Offer frictionless interactions with government departments such as the DWP, DVLA and HMRC to ensure citizens can service their needs in an effective manner.

- Strengthen relationships with citizens by delivering seamless, ubiquitous and frustration-free ways to interact with your departments, and build services around their interactive needs whether through mobile devices, social media or phone calls.
- Ensure that your department remains safe and secure throughout digital transformation activities with cyber security and compliance services that minimise the risk of potentially damaging data breaches and cyber-attacks.
- Maximise your investment in IT, transitioning away from costly, resource-intensive, cumbersome outsourced IT contracts towards agile, commercially flexible partnership arrangements. Free up cost and resource to reinvest in frontline services and skills.

## Enable your workspace – not workplace

Implement systems and processes that enable your people to work effectively wherever they are, maximising their productivity and enabling citizen services to continue seamlessly.

- Communication and collaboration services allow you to transform your citizen experience through smarter, faster technology solutions that enable your people to be at their very best, wherever they are or whatever shared space they operate from.
- Multi-device collaboration enables you to communicate with colleagues in the office, at home, or from remote locations in a manner that facilitates streamlined, joined-up working.
- Allow your people to remain digitally compliant when communicating and collaborating. Ensure channels are secure to provide the right assurances and keep communications channels protected.

## Deliver trusted and secure services

Ensure citizens' information is secured throughout their digital journeys and any services that they use, avoiding the financial penalties and significant reputational damage that can result from data breach.

- Protect your citizens and your people from cyber threats with robust security monitoring and management to identify threats and remediate them before they cause harm.
- Protect critical national infrastructure, and ensure your services and departments remain protected in today's hostile digital landscape.
- Prepare remediation against cyber-attacks to ensure critical national infrastructure is resilient and recoverable if an attack was ever to take place.
