

POLICING SOLUTIONS

The communities that police authorities serve are increasingly diverse and complex, necessitating a more sophisticated response to the challenges the authorities face now and in the future.

Beyond Cloud.

Whether its cybercrime, violent crime, or new threats from serious and organised crime like fraud, modern slavery or terrorism, police authorities must acknowledge that if they are to meet their communities' needs, they must continue to adapt to the modern policing environment.

What is your police authority's approach to making transformative change across the entire scope of your operations? How will you harness the power of digital, data and technology to better protect the communities you serve? How will you maintain a clear vision that keeps the public, and improving policing for them, at its heart?

"We see the effective implementation of new technologies as critical to policing in the 21st century. That Six Degrees could focus on our organisational needs and apply suitable solutions was key to the success of the project."

– Head of IT, Territorial Police Force

Deliver a seamless citizen experience

Deliver seamless, digitally enabled experiences. Give the public more choice in how they engage with you, using channels, media or devices most relevant to them.

- **Fully integrated, harmonised cloud-based services** aligned to UK police authorities' operational and compliance requirements, enabling you to deliver frictionless digital interactions.
- **Hosted contact centre solutions** enable your people to deliver seamless, ubiquitous and frustration-free end-to-end citizen journeys.
- **Robust SD-WAN-based network infrastructure solutions** enable you to harness shared data and connected devices ethically and securely.
- **Cloud platform and data services** provide stable infrastructure foundations upon which your police authority can host digital technologies that enable the public to protect their communities.

Address harm

Harness the power of digital technologies and behaviours to identify the risk of harm and protect the vulnerable in the physical and digital world. Deliver earlier, more precise and targeted proactive policing approaches and early interventions through the application of digital technology.

- **Application-level consultancy capabilities** help you translate evolving definitions of threat, harm and risk (THR) into digital formats that complement human judgement.
- **Public sector-aligned hosting services** enable you to host digital tools that rapidly identify harm related behaviours in order to target interventions and disrupt criminal activity.
- **UK sovereign cloud and colocation hosting** enable you to design and deliver digitally-enabled interventions that work across boundaries.

Enable officers and staff through digital

Invest in your people, from leadership through to the front-line, to ensure they are equipped with the right capabilities (knowledge, skills and tools) to deal with increasingly complex crimes.

- **Cloud assessments** help you understand where you can digitise core policing processes — removing the need for manual, repetitive and duplicative business processes.
- **Network infrastructure services** provide the connectivity fabric that allows you to provide officers and staff with the digital tools they need.
- **Communication and collaboration services** allow you to establish new digitally-enabled, dynamic workforce models.

Embed a whole public system approach

Foster a philosophy of openness and deepen your collaboration with public sector partners to jointly design and tackle complex public safety issues – sharing data insights and making use of digital tools to work more effectively across the public safety system.

- **Cloud platform and data services** provide stable infrastructure foundations upon which you can deepen your collaboration with public sector agencies to unlock effectiveness.
- **Secure, fully-managed SD-WAN services** enable you to develop ‘fluid’ data and insight exchange between public sector agencies, within appropriate ethical and legal boundaries.
- **Communication and collaboration services** support the creation of integrated digital public services for public safety.

Empower the private sector

Strengthen your relationships with the private sector to empower it to appropriately share in public safety responsibilities. Explore new ways to safely empower those with an active desire to help.

- **Experienced, public sector and technology-aware consultants** help define expectations through open dialogue with the private sector but also with input from citizens.
- **Cyber security maturity benchmarking services** help build awareness of digital threat, harm and risk.
- **End-to-end cloud-led technology services** help support the private sector role in digitally-enabled public safety and foster a vibrant PoliceTech landscape.
