EMV Setup Using Mercury Pay – Pro 9

Requirements Prior to Using EMV:
- ✓ Administrative Permission to download and install on all CAP computers.
- ✓ VeriFone VX805 pin pad with Mercury E2E Installed.
- ✓ Contact Mercury Pay and enable EMV, E2E and Tokenization. Mercury Pay will assign the business a new Merchant ID and provide the NETePay deployment ID.

IMPORTANT NOTES: Follow the steps below in the EXACT order they appear or you may experience issues.

1. Update CAP Pro 9 on all computers. SellWise MUST be closed on every computer during this step. Please press the link below on each station:

   http://capretail.com/download/2014/SetupPro9_EMV.EXE

   ➤ After you click the link, press **Save** and then select **Run**. Press **Next** until a message appears that says *Finished*.

2. Install NETePay on the main station/server only. Press the link below for the setup document to install NETePay. ONLY do this on the main station/server.
