

Enhance your Scanners and MFDs with AI

Aluma helps you quickly expand the range of functions performed by your portfolio of office devices.

Even in the remote-working, digital-first world we live in, a lot of business still gets done using paper. Digital transformation starts with the ability to digitize and optimize information at the earliest opportunity in the document lifecycle — ideally as soon as the document is scanned.

Aluma brings a new level of intelligence to scanners and multifunction devices (MFDs) with advanced document processing capabilities accessible directly from the device. Our tools allow device manufacturers and Managed Print Services (MPS) providers to be at the center of their client's digital transformation journey by empowering MFDs to do more than just copy, print, and scan.

MFD vendors can expand the power of the device by offering AI-enabled functions, powered by Aluma to provide increased value to clients and additional revenue streams to office equipment providers.

Through the power of Aluma, intelligent office devices will recognize documents, extract key fields, and automatically feed back-end systems.

Easy Integration

Aluma document processing tools are accessible directly from the device via simple API calls to our cloud service.

No Capital Investment

Aluma is designed to be easy to use. No up-front fees or user licenses. Pay for the processing you consume and that's it.

Aluma is a world leader in advanced intelligent document processing technology.

Expand the processing power of existing devices

Ultra-fast and on-demand OCR

Conveniently OCR scanned documents in record time. Allow your end users to OCR 75-page documents in as little as 15 seconds, and do it right from the control panel of your MFD or scanner.

No OCR licenses required; no desktop software or servers required.

Intelligent Data Extraction & Indexing

Extract critical information from documents at the time of scanning.

Train your MFD to automatically recognize delivery notes, invoices, correspondence and more, then reliably and quickly extract key information to feed back end systems and back office processes.

Intelligent Auto-filing

Take the drudgery out of document naming and filing by using information extracted from the document.

Let AI help your users to automatically file contracts based on contract type and counterparty, or file invoices based on invoice numbers and dates. New document types are supported with 5 minutes of training.

Automated Redaction

Ensure that sensitive and private data remains private with automatic redaction of PII and GDPR data at the time of scanning.

Empower your end users to verify redaction accuracy on the MFD and dispatch redacted documents to selected recipients.

Information Governance

Ensure scanned documents are named, filed, and tagged automatically based on corporate and department policy.

Instantly apply new filing and categorization policies for all newly scanned documents.

Print Security

Intelligently inspect printed pages for private, confidential, and sensitive information.

Secure this content by automatically adding "confidential" or "sensitive" watermarks on relevant data and pages.

Help your customers do so much more by embedding advanced functions into your hardware or device software.

Our automation tools remove the drudgery of document management, take the robot out of the human, and allow people to focus on more meaningful and valuable work.
