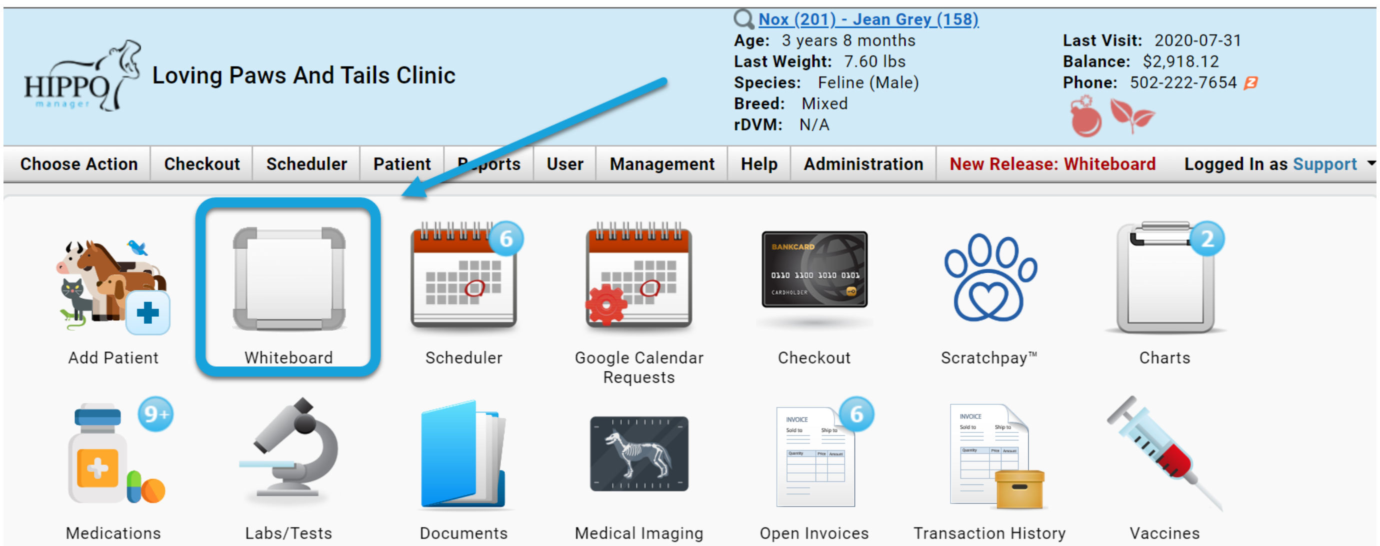
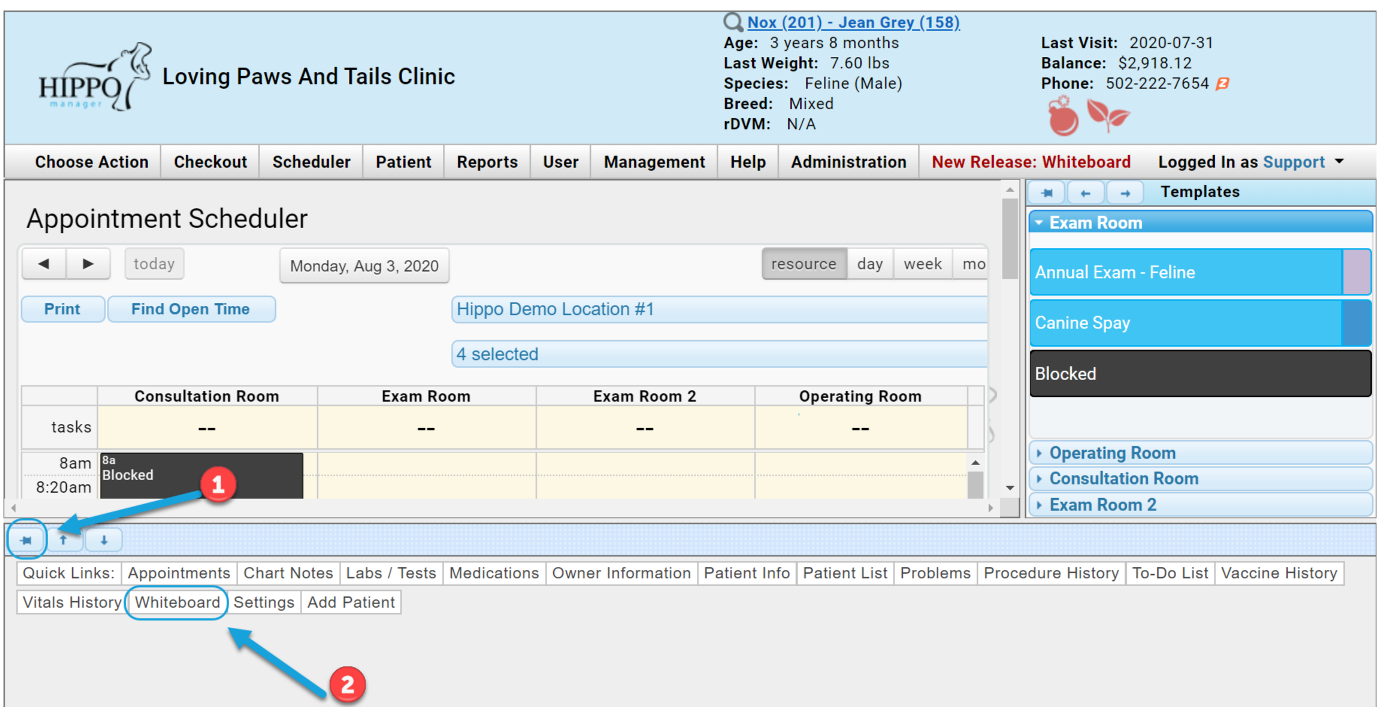
Treatment Sheets

Hippo Manager's new treatment sheets allow you to easily track what services, treatments and medications your patients have received while in your clinic or hospital. These treatment sheets also connect directly to your charts for medical records, and your scheduler and whiteboard for easy updating.

You can access a patient's treatments by first opening up the new Whiteboard widget. Remember, widgets can be accessed on the Choose Action page, under the schedule, under the patient tab, or under your chart notes by clicking the 'pushpin' button.

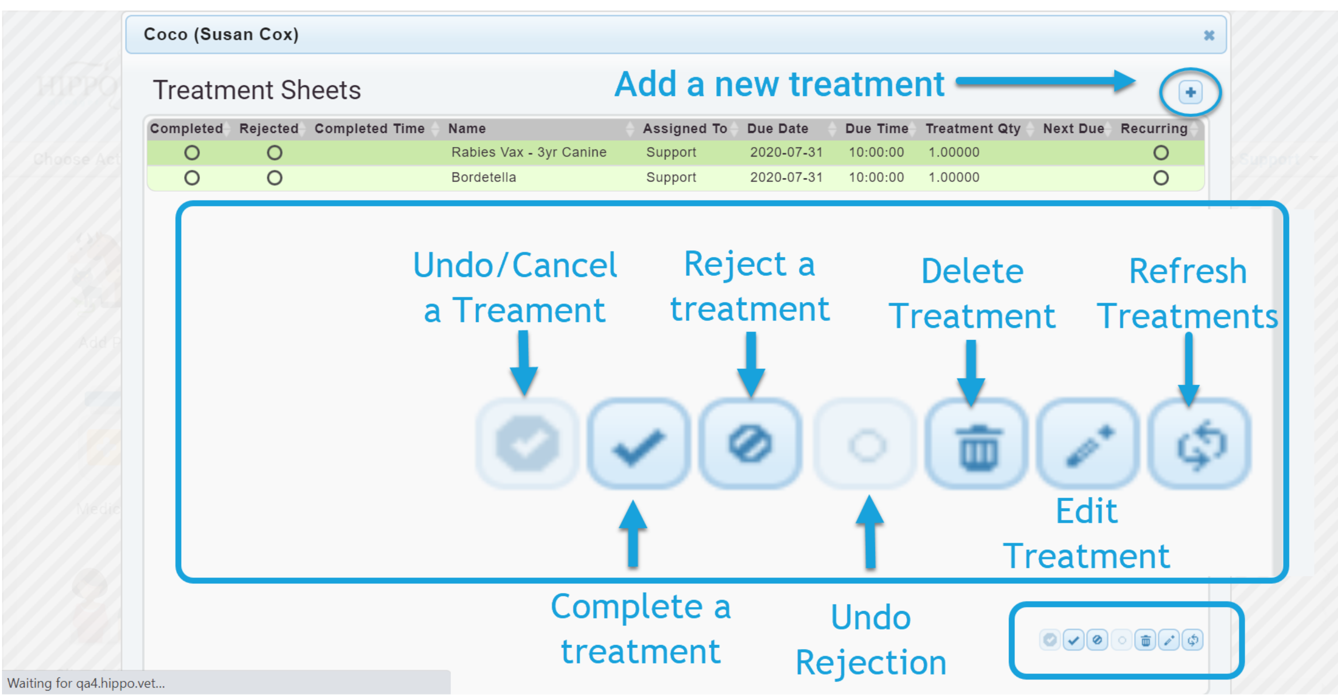




Treatment Sheets

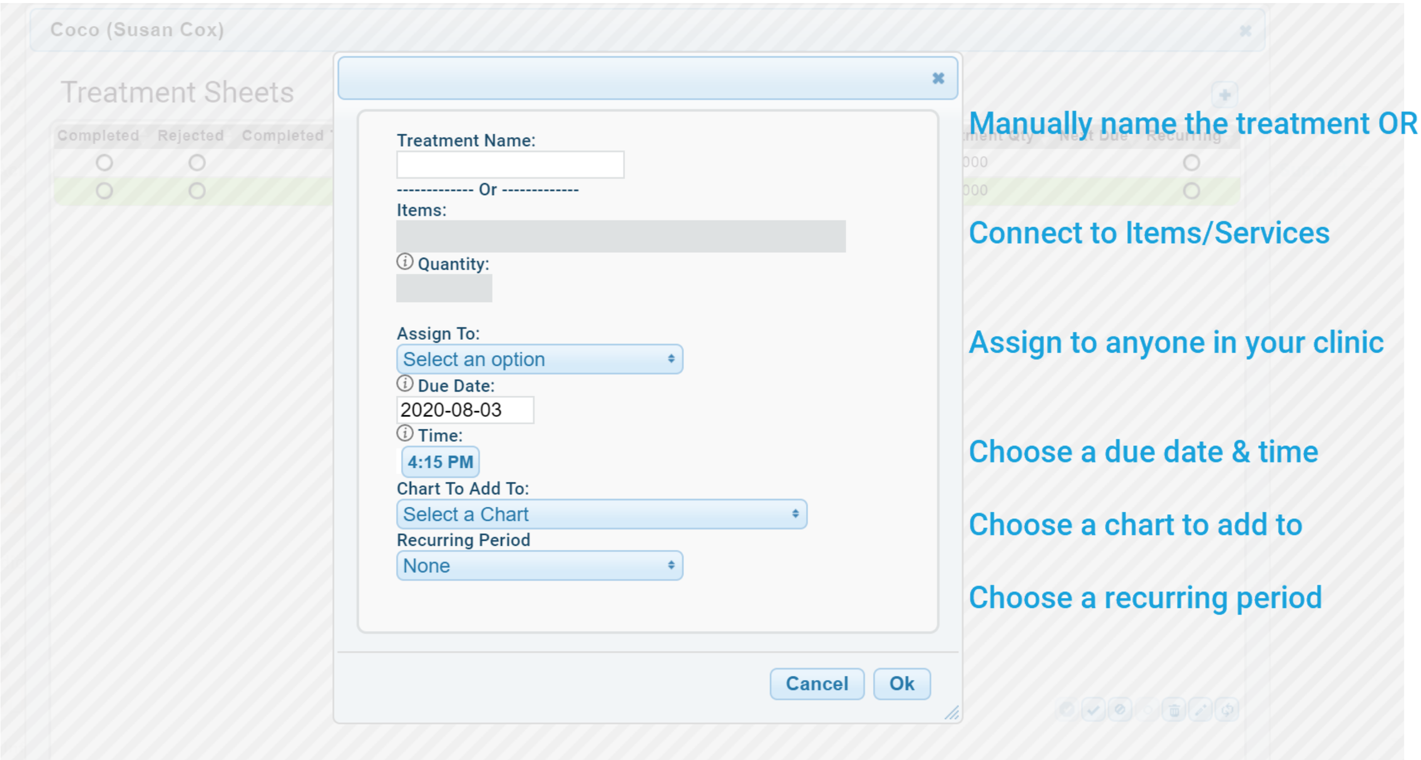
Next, click on the patient whose treatments you would like to access, and click the treatment sheet icon at the bottom of the widget.

This will make this patient the active patient in the patient reserve, and open their treatment sheet.



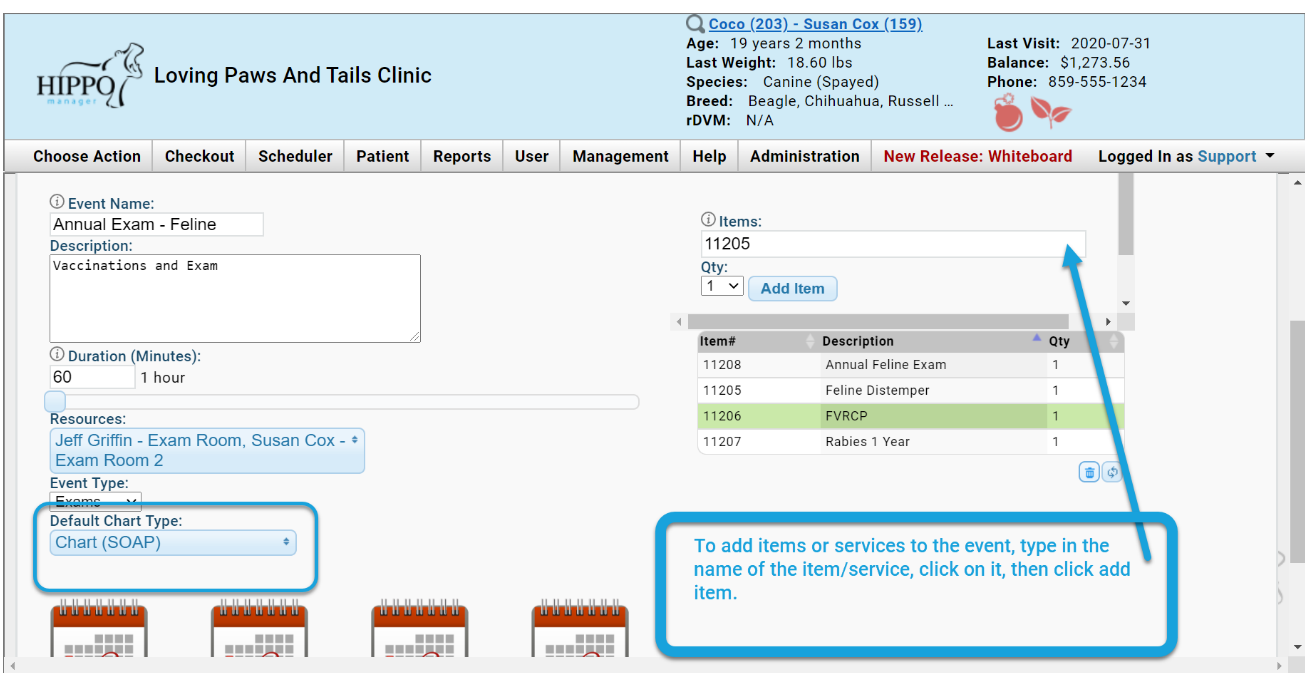
Treatment Sheets

Treatments can be added manually on the treatment sheet page:



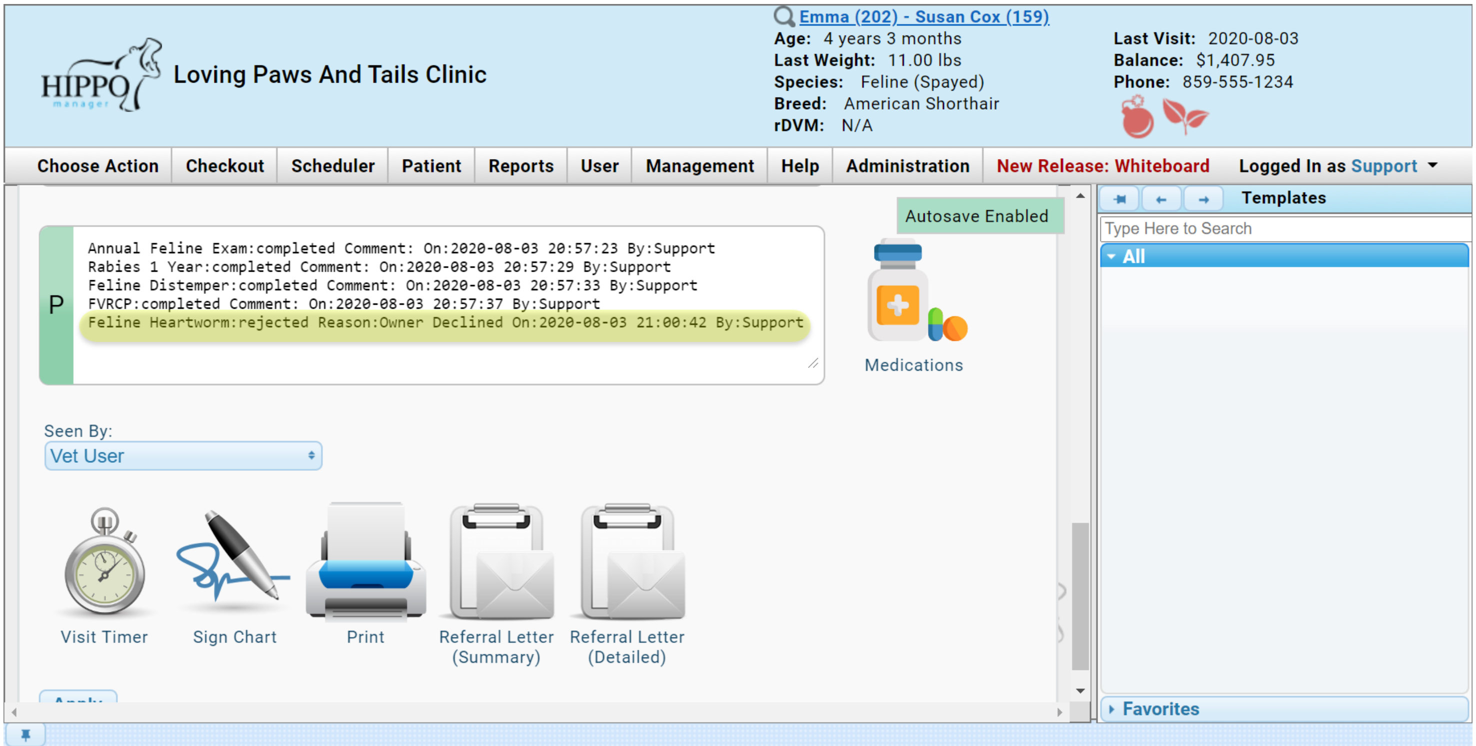
OR treatments can be auto-created based on the appointment template you use.

To edit your appointment templates to create a standard treatment sheet, open the scheduler, then click "Edit Events". In addition to the standard settings, you now have the ability to add items and services that will be automatically added to a patient's treatment sheet when the appointment is used. It was also automatically open a chosen chart type.



Treatment Sheets

When you complete or reject a treatment, this will be noted on the auto-created chart.



Helpful Hippo Hint

All treatments must be completed, rejected, or deleted before a patient's status can be changed to "checked out" on the scheduler and whiteboard.

The best part about our new treatment sheets is that once an item or service is marked as completed on your treatment sheet, it is automatically added to your invoice for the patient! To access the auto-created invoice, just click "Saved Invoices" on the checkout screen, then click "open".
