# Medications

A new medication can be added from the Medications Widget on the Choose Action screen or Medications Quick Link, from within a chart note, or from the Checkout/Sales Register.

# Medications

## Add a Medication

**1** To add a new medication, click on the ➕ sign.

**2** Select the medication from the medication dropdown (optionally: you can search by keyword).

**3** If adding the medication outside of the chart note, select the chart note to tie the medication to.

**4** If there is no unsigned chart, follow the prompts to create a chart note.

# Medications

## Sign and Unsign Medications

**1** If a medication is unsigned or has unsigned dispensations, the **# of Unsignd** column will display how many.

**2** To sign or unsign a medication with no refills, click on the ⚕ icon.

**3** To sign or unsign a medication with refills, double click the medication or click on the pencil ⚕ icon. Each individual dispensation will need to be signed/unsigned by selecting the line and then clicking the ⚕ icon.

## Adding/Removing Medication at Checkout

**1** If adding a medication at the checkout screen, it can be associated with an unsigned chart note by selecting it from the Chart Note menu prior to adding the medication to the invoice

**2** Quantities can be adjusted once added to the invoice

**3** Adding a medication to the checkout screen will also add it to the Medications widget

**4** To print the medication label or Rx, go to the Medications widget

**5** If adding dosing instructions or allowing refills, be sure to add those before printing
