

## CONFLATION MANAGER

*“Accelerate your Ability to get more out of your GIS now...”*

### Business Problem

- Data lacks positional accuracy
- Field crews are deployed inefficiently, costing more time and money
- GIS data is not considered the authoritative or trusted source for field operations

### Business Solution

- Improved data integrity for estimates and spatial analytics
- Reduced need for truck rolls/field crew deployment, increased efficiency in field crew usage
- GIS data becomes a sustained, authoritative and trusted source for field operations

### Overview

Conflation Manager is a data repositioning tool, that helps data editors and specialists move spatial data between sources to create a higher accuracy land base and baseline asset inventory. It includes functionality for automated generation of control vectors based on street centerlines, and conflates data according to user-specified tolerances and parameters. It can be utilized daily to introduce new subdivisions into GIS, and scales in usability to include the repositioning of larger geographic areas. Conflation Manager handles data capably across disciplines, allowing electric, gas, water, sewer, and telecom networks, as well as other physical assets, to be quickly and efficiently mapped.
