DISPLAY MANAGER

"Accelerate your Ability to get more out of your GIS now..."

Business Problem

- Map content is difficult to find and filter

- Map templates vary and are often customized and then printed, not stored

Business Solution

- Reduce customized templates

- Reduce dependency on paper maps

Overview

Display Manager makes it easier to filter the display of map content and related features, such as annotation. Features can be selected based on attributes like feeder number or work order number. Views can be saved and shared among users in display libraries for future use.
