

"Accelerate your Ability to get more out of your GIS now..."

Business Problem

- Lack of trust in GIS data
- Lack of visibility into data trends
- Inability to do baseline reporting

 Business Solution
 Sustain possessive users trust in GIS data

- Elevate ownership and stewardship
- Implement data governance
- Automate reporting and sharing processs

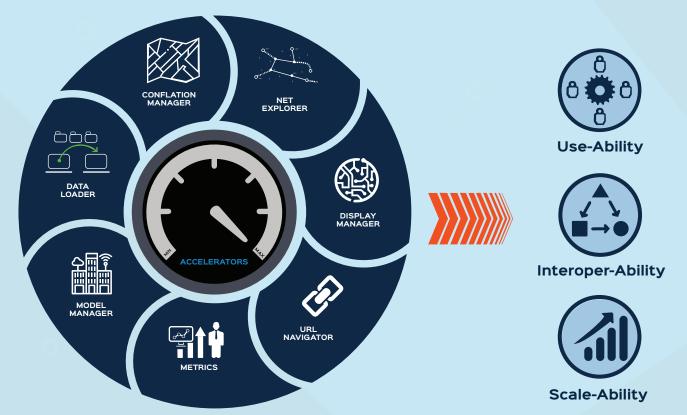

Overview

Metrics is a baseline reporting tool to define, schedule, compute, and store data governance statistics on user chosen fields of interest in enterprise geodatabases. The metrics tool computes and stores current statistics and also historical trends to easily understand changes over a week, month, and year. Out of the box, it comes with ready to use metrics for counting features by feature class and subtype, field density, and unposted changes in versions. The results can either be stored in a hosted feature service for visualization using ArcGIS Opera-tions Dashboard, ArcGIS Insights, or a relational database for deeper analysis with a business intelligence tool. Metrics also provides the choice to email results as csv files for Microsoft Excel or publishing as html files for websites.

GIS ABILITY ACCELERATORS

Accelerate **Focused Abilities**

CUSTOMER BASE

- Public and Private Utilities (Electric, Gas, Water, and **Telecommunications**)
- National, State, and Local • Government
- **Pipeline and Petro Chemical**
