

LANDING ZONE ACCELERATOR

Accelerate your Digital Transformation with a well-architected foundation for your Public Cloud deployments

Want to become the master of your digital transformation journey?

Secure the foundation of your Technology Stack !

The Landing Zone Accelerator provides organizations of all sizes with a mechanism to speed up their cloud transformation journey. This brings best practice based value to your Digital Transformation process and reduces the need for immediate and difficult to scale, internal cloud expertise. When complemented with the Landing Zone as a Service model the continuity of your Public Cloud environment is warranted.

This enables you to focus on key elements like Customer Experience, Operational Processes and new Business Models!

The Landing Zone Accelerator provides you with support for:

BUSINESS ENABLEMENT

- ▶ Increase business agility
- ▶ Reduce time-to-market
- ▶ Increase transparency

PROFESSIONAL ADVISORY

- ▶ Pro-active consulting
- ▶ Continuous optimization and recommendations
- ▶ Advocating innovative services

EDUCATE AND ADOPT

- ▶ Assess current skills
- ▶ Tailored training
- ▶ Build support & create momentum

NO VENDOR LOCK-IN

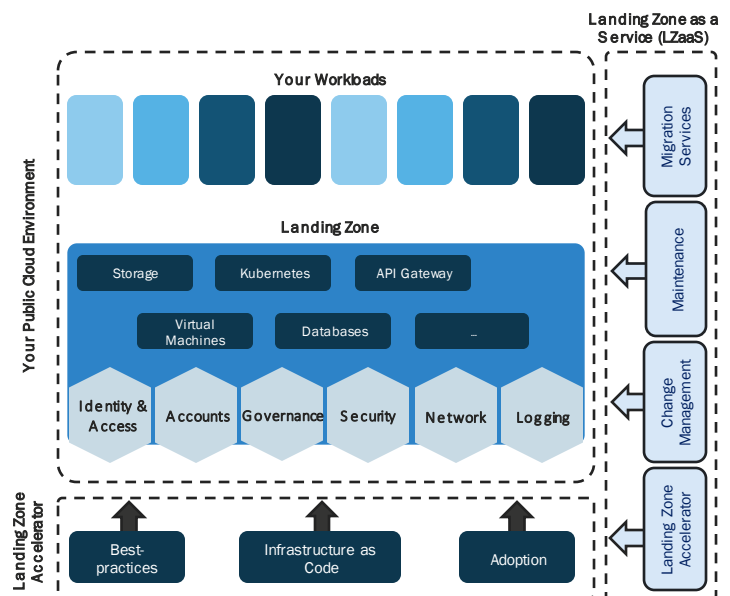

- ▶ Scale down managed services as you learn
- ▶ Grow cloud control in-house over time
- ▶ No proprietary tooling / languages

What is included in our Landing Zone Accelerator?

- ✓ Cloud readiness assessment to identify the needs of the Landing Zone;
- ✓ Quick setup of a well-architected multi account/subscription environment to start with the onboarding of workloads;
- ✓ Governance controls to increase transparency and be compliant (e.g. Policy, Security Center and audit logging);
- ✓ Adoption workshop on outlining the deployed components and how to deploy your workloads;
- ✓ Exit strategy: You have no lock-in to our infrastructure as code deployment framework, your services will still be running and manageable.

Landing Zone as a Service (LZaaS)

The Landing Zone as a Service model provides a broader scope of services, including the Landing Zone accelerator package, Change Management, Maintenance and Migration Services. This service is available as a monthly subscription with a minimal up-front investment for the initial Cloud Readiness Assessment. For more details about LZaaS contact us at info@cloudnation.nl

DELIVERABLES:

Get your Azure Foundation and sustainable Landing Zone in place for 15.000 Euro.

- ✓ Identify gaps in your delivery capability;
- ✓ Define solid foundation for growth including innovation for Data Science/AI/ML;
- ✓ Get a clear view of what is next, relevant to control, maintenance and continuous development;
- ✓ Create a foundation that supports a BizDevSecOps culture/way of working.

LANDING ZONE ACCELERATOR

Outlining our 5 step foundation approach

Accelerate your cloud transformation in 5 Steps? CloudNation *knows how!*

To deliver a pragmatic approach to the Landing Zone Foundation, we have developed a 5 steps program, which can be tailored to your specific needs.

After completion of these steps you are ready to get onboarded to the cloud Landing Zone Foundation and start to migrate your Databases, Workloads, build your cloud native solutions or implement applications to create more value from your data.

You can choose to onboard the workloads yourself, or have CloudNation support you with the deployment or creation of resources. We can migrate your workloads based on Virtual Machines, Kubernetes, a variety of Databases, or one of the other services. Optionally we can do this as part of a LZaaS subscription model.

Step 1

Cloud Readiness Assessment

Setting the stage. We work closely with your team to discover the current environment, assess the skills and define the expected outcome. We will focus on your current application landscape, processes, Security, IAM, policies, budgets, networking and logging.

Step 2

High Level Design

Cloud Architecture design. We will design the foundation of the desired state of your Public Cloud environment. This will be done in close relation with the target operating model and specific regulatory requirements. The design incorporates industry best-practices, tailored to your organization.

Step 3

Build

Configuration and scripting. Start of the configuration of Management Groups & Subscription structure, Accounting RBAC, Logging (Audit logs) and Security specific settings, Basic set of Policies, Resource Groups & Tagging, Shared Networking infrastructure (cloud).

Step 4

Iterate

Finetune. During this step we will finalize the configuration to match specific needs of the organization and grant permissions for the specific roles.

Step 5

Adoption workshops

Now that the Landing Zone is ready to onboard your workloads, we support you and your stakeholders to get started and create value.

Optional: LZaaS subscription

Updates & application migration support

To keep your Cloud Landing Zone up-to-date and to help you with quick onboarding of new workloads using our blueprints, we offer a Landing Zone as a Service (LZaaS) subscription model. The LZaaS option reduces your CapEx for Professional Services.

"With the Landing Zone as a Service of CloudNation we were able to start our migration within weeks instead of months, without huge upfront investments. This helps us to reserve more budget for innovation"
