

Data Destruction is the most critical aspect of any comprehensive ITAD solution. There are numerous ways to eradicate data, each guaranteed to keep you secure, but different in their impact on our world and environment. DMD is AAA NAID Certified for onsite and offsite data destruction. DMD maintains the R2 certification for electronic waste compliance and ensures we protect you for compliance across HIPAA, SOX, PCI, GLBA, FCRA, and other associated state and federal laws.

Erasure

Complete elimination of your data adhering to NIST 800-88 using certified software overwriting the data. This is the most environmentally conscious approach to data destruction. We utilize certified software and can do one, three, or a custom number of passes.

Shred

The physical destruction of a hard drive and the associated data through sheer machine force. This does not eliminate the ones and zeros, merely makes them irretrievable. Depending on age, condition, and relevancy, this may be necessary.

Degauss

The physical disruption and elimination of magnetic fields on disk media, which changes where data is stored making it unreadable and irrecoverable.

Flexible Destruction Locations

DMD can provide services either Onsite or Offsite. Onsite elimination of data means in your environment without removing the physical asset. The most secure option, but with greater cost and time associated. Offsite refers to data destruction that occurs off your premise. We will complete these activities in a NAID certified facility

The DMD Difference:

DMD guarantees complete responsibility with the DMD Enterprise Agreement which generates predefined terms for all equipment in all locations.

Our solutions provide you confidence with:

- Flexibility – tailored range of disposition options across the US (international via partners)
- Quantified Visibility – self-serve reporting detailing asset status and providing certificates of material handling according to strict independent certifying bodies
- Commitments – our enterprise agreement to guarantee process across all items in accordance with all regulations and our B Corp commitment to profits with purpose

DMD Systems Recovery, Inc. (DMD) provides IT Asset Disposition solutions adhering to the most rigorous environmental and security standards to deliver confidence for companies who value our world and their reputation. DMD works with hundreds of companies and public entities to securely destroy their data, decommission assets, and redeploy or remarket the equipment across IT categories including DataCenter, End User Compute, and Mobility.
