

GHG Protocol Standards

9 out of 10 Fortune 500 companies reporting to CDP use the GHG Protocol.

The Greenhouse Gas Protocol is the world's most widely used greenhouse gas accounting standards for companies.

The path to Net Zero is not a question of if, but of when and how.

Most companies start with Scope 1 & 2 emissions, but did you know:

When 40% of GHG emissions are Scope 3, you must include these emissions in your elimination plan.

DMD's ITAD services may help mitigate Scope 3 emissions - Product End of Life and Leased Assets. We provide comprehensive reporting you may use to track progress towards your environmental goals - GHG Protocol or any other environmental standard.
