Entech signs the Managed Service Providers Stimulus Pledge

Fort Myers, FL, May 12, 2020 – As the government has planned and continues to plan relief efforts to support small businesses during the coronavirus crisis, Entech has joined a group of 59 IT service providers nationwide in a pledge to continue business operations in support of their employees, clients, and vendors. The MSP Stimulus Pledge is a collective of peers and competitors in the IT Services industry committing to using government assistance, including PPP funds, as intended: to keep team members employed and keep the economy moving. The pledge currently protects over 1300 jobs in the industry.

The MSP Stimulus Pledge asks organizations to use stimulus funds to commit to avoiding layoffs of staff and pay reductions, paying bills on time, providing no increase in owner's compensation, working as partners with vendors without demanding concessions simply because they can use the leverage of economic conditions, and running the businesses in a manner that creates a strong foundation for our employees and clients into a new future.

"Our employees are our most important assets. We, as business leaders, need to make sure they know how valued they are for us. Signing this pledge is another way to show our employees, clients and vendors that we are committed to do our part in stimulating the economy", said Jake Spanberger, President of Entech.

Technology services are critical during the COVID-19 pandemic and will continue to be vital to the business community moving forward. The stimulus program has given the technology industry an opportunity to become collectively stronger which will be necessary to help businesses overcome the challenges as they move into an uncertain future.

About Entech

Headquartered in Fort Myers with an additional location in Bradenton, Entech is an IT Managed Services and Integration provider doing business in Southwest Florida since 1998. Entech is committed to provide best-in-class, enterprise-level support, project solutions, and strategic technology consulting to small and medium size businesses.
