

## CASE STUDY

HOW HARNESS USED CUBE TO CREATE A MUCH NEEDED  
SINGLE SOURCE OF TRUTH FOR THEIR PLANNING DATA

## CHALLENGE: VERSION CONTROL

Because the business moves in real-time, it became an increasing challenge to manage all of the versions of the forecast across Google Sheets and Excel. It became increasingly difficult for users to know which was the “right one” especially when the forecast or plan had been updated.

“I was always in Google Sheets and Excel - which I love, but version control was such an issue, loading up forecasts to dimensions. If a stakeholder is in an old version and you have moved on that causes internal thrash sowing seeds of distrust.”

## SOLUTION: CENTRAL SOURCE OF TRUTH

**With Cube, we no longer argue about data.**

“Its amazing how visibility can have such a positive impact on how we work together and my ability to get my job done well. Cube not only lets me have access to past scenarios with an easy ‘fetch’ but I can also streamline variance analysis process. Creating templates that allow me to move quick, vs. what it was in the past. My favorite feature? Drill down - It’s dramatically increased the time I can get things done. The data is at my fingertips.”

### ABOUT HARNESS

The industry's first Continuous Delivery-as-a-Service platform designed to provide a simple, safe and secure way for engineering and DevOps teams to release applications into production.
