

Cloud Services

Universal Product Interoperability

Open standards focus ensures compatibility.

Supports Flexible Business Models

Custom billing arrangements enable business agility.

Scalability that Promotes Reliability

Remote management guarantees smooth operation.

Specifically designed to meet the needs of Fleet, Workplace & Public Charging customers.

A comprehensive EV Charging administration solution.

Full OCPP Management

- ADR 2.0 & OCPP 1.6J Compliant
- Multi-user EV charging hardware & driver management interface
- Location-aware EV hardware setup & management
- Web-enabled, platform independent, virtual & secure user access
- Support for driver access via both mobile phone application & RFID tags

Flexible Host & Station Roles

Integrated model:

- All chargers & locations are managed by one organization
- Host-level pricing & usage rules defined for specific locations
- Roles-based system allows diversity of assignments for administrative users

Distributed model:

- Enables native management & maintenance of chargers by an organization
- Enables a variety of "host" organizations to manage specific business models
- Provides for separate organizational permissions & access rights for hosts
- Host-level pricing & usage rules defined for specific locations
- Independent user logins & reporting for hosts vs. station manager

Multiple Pay Models

- Ability to create usage rules that enable differentiation in EV charger access
- Ability to apply usage & pricing rules for accounts, drivers, vehicles, organizations
- Host-defined flexible pricing rules designed support a variety of business models
- Support for Flexible Public charging, including:
 - Independent kWh pricing & Parking pricing
 - Independent tax structures & fee structures.
 - Support for Fleet & Public charging Mixed-use Models
- Ability to designate transaction fees as driver-paid or administrator-paid fees
- Driver accounting (via driver portal or mobile app) & charger administration

Robust Reporting

- Extensible report template creation enables custom reports
- Allows for charger and organizational usage and session reporting
- Ability to save and share report templates among administrative users
- Customized organizational logo provided on reports
- Data available to data analytics software via API (coming in release 2.0)

Intuitive

Flexible

Scalable

Driver Experience is the Key to Success™

The ChargeUP network provides easy driver access via mobile phone application & RFID tags, multi-user EV charging hardware & driver management interface, as well as location aware EV hardware setup & management.

Ease of Use, with Administrators in Mind:

- Web-enabled, platform independent, virtual & secure user access
- Roles-based system allows diversity of assignments for admin users
- Usage rules enable access for group (drivers, vehicles & organizations)
- Robust reporting for charger & organizational usage & session reporting
- Extensible report template creation enables custom reports
