FOR IMMEDIATE RELEASE

ACBM to Provide Support and Maintenance of the Cetova BI and Reporting Suite for JDE Users

After news that the Cetova reporting solution might be discontinued, the software will continue under new ownership.

Berkeley Heights, NJ – February 8 2022: ACBM Solutions founder Larry Furino today announced that Cetova’s suite of robust reporting tools, including C-FAR, C-QRY, and Execview are now part of the ACBM Solutions portfolio of products.

Cetova Earned Its Place in the JDE Ecosystem

While other solutions exist for reporting in the JD Edwards ERP ecosystem, Cetova has long been recognized for ease of use and full-featured capabilities. Users with no IT background can leverage business logic and language to create dynamic reports that auto-sync with JDE in real-time for accurate, in-depth reporting across Accounting and Operations.

Users point to features like the drag-and-drop interface, the familiar Excel-like functionality, and time-saving automation as reasons they rely on the solution. The system requires no knowledge of SQL to effectively query data and build reports or dashboards. Rich visual reporting around KPIs and metrics deliver “at-a-glance” analytics while the ability to drill down and back provides the option to see more supporting data.

ACBM Saw the Value to Customers and Took Action to Help

In 2021, SNP made the difficult decision to shift focus away from the reporting tool and onto other business and technology initiatives. This left two options. The first option was to sunset the technology and have customers move to other reporting platforms. A more appealing choice was to find a trusted technology partner with the experience to bridge the gap, keeping the software operational and providing strong ongoing support. As a long-time expert in the Oracle ecosystem for JDE, ACBM Solutions was in the right position to take on the challenge.

Larry explained the decision behind taking ownership of the Cetova product, *“I had customers telling me they didn’t know what they would do without this tool. It’s become a core part of their business and there’s simply nothing else on the market that does reporting as well for JDE users. One client told me it would cost them \$500k if they had to replace Cetova. It was clear*

that someone needed to step in and make sure the JDE community didn't lose access to this great software."

Today, Cetova users can continue to access their report writing software as normal and updates/upgrades will continue. ACBM is also offering the software to new customers looking to fix or enhance their reporting capabilities.

About ACBM Solutions

ACBM Solutions helps companies transform opportunities into solutions with the JDE EnterpriseOne Orchestrator. ACBM Solutions helps clients maximize their investment in JD Edwards EnterpriseOne by providing training, consulting, and products that fast track their digital transformation roadmap. The company was started in 2014 after Founder Larry Furino discovered how the Orchestrator could be used to build real-time IoT integrations. Since then, ACBM Solutions has become a trusted collaborator helping clients automate business processes and simplify their data integrations.
