

# Utah: Required vs Optional EVV Data Definitions

Regardless of which EVV solution you choose; or if you are submitting visits using Utah's EVV API or CSV method; certain information is required on each visit to ensure compliance. In order to ensure your claims payments are not reduced, denied or delayed, it is important to understand what information is required on each visit.

- **Member ID (req):** Client individual identifier. This is generally the client's Medicaid number. In some instances, this can be a unique identifier such as a SSN
- **First name (req):** Client full first name
- **Middle Initial:** Client middle initial
- **Last name (req):** Client full last name
- **Service code (req):** Billing code associated with the service being provided. These codes are state specific codes
- **Service description:** Description of the services associated with the aforementioned codes
- **Provider ID (req):** Your unique provider ID number
- **Employee Performing Service (req):** Name of the employee providing the care during the visit
- **Begin date (req):** The date the visit began
- **Begin time (req):** The time the visit began
- **Begin address (req):** Address or location the services began
- **Begin Apt/Suite/Floor:** Apartment, unit or unique suite information
- **Begin City (req):** City the visit began in
- **Begin State:** State the visit began in
- **Begin Zip:** Zip code the visit began in
- **Begin Geo Latitude:** GEO latitude of where the visit began
- **Begin Geo Longitude:** GEO longitude of where the visit began
- **End date (req):** End date of the visit
- **End time (req):** End time of the visit
- **End Address1:** Ending address of the visit
- **End Address2:** Additional address details
- **End City:** Ending City of the visit
- **End State:** Ending State of the Visit
- **End Zip:** Zip code
- **End Geo Latitude:** Ending Geo latitude
- **End Geo Longitude:** Ending Geo longitude
- **Orig\_receipt\_id (req if CORRECTION):** Original batch number
- **Batch\_id (req):** unique batch number created for each group of visits uploaded in one file
- **Record\_id (req):** Unique id for each record
