

DOUBLE SHUTTER

The double shutter feature offers a unique way to radically prevent introduction of Gas or Solid Explosive materials in the safe. It is positioned in the cash transport area between the shutter and the opening of the safe.

The device is synchronized to the shutter and in case of illegal opening or breaking of the shutter, the guillotine blade remains blocked in its closed position. The entire device is non-removable, non-extractable thanks to its robust anchorage inside the safe.

Prevents the insertion of explosives into the ATM

Multi ATM vendor compatibility

Non removable
Non-extractable

Effective and proven solution

Easy to install

No change in the operating process

Don't wait to be attacked, Prevent it.

Anti-explosion device for Cash Dispenser

Available for

Diebold

- Opteva 562, 562R, 760, 868 and series 5000 (5500)
- Reinforced frontal shutter connected to drop-lock barrier
- Installable either on center at staging phase or as on-site upgrade

Wincor Nixdorf Cineo

- Cineo 2550
- Equipped with sensors able to detect forcing attacks to frontal shutter and to close drop-lock barrier in closed position to inhibit access to ATM safe
- Programmable time slots
- Installable either on center at staging phase or as on-site upgrade.

NCR

- In release 2018 Q2 for NCR S2 6625

Features

- ✓ Drop-lock security system installed directly at the opening of the money transfer area outside ATM safe.
- ✓ Mobile barrier synchronized with frontal shutter opening/closure to block introduction of foreign objects like solid explosive, gas inflating pipes and triggers into ATM safe during banknotes transit.
- ✓ Equipped with intelligent electronic board.
