

**Whatever
it takes to
deliver
the precision
components
you need**

MW Components

Welcome to better

Today's manufacturers face greater demands than ever before. Customers expect constant innovation. They want products that offer enhanced performance and greater reliability. And they want it all for less cost and delivered against demanding timelines.

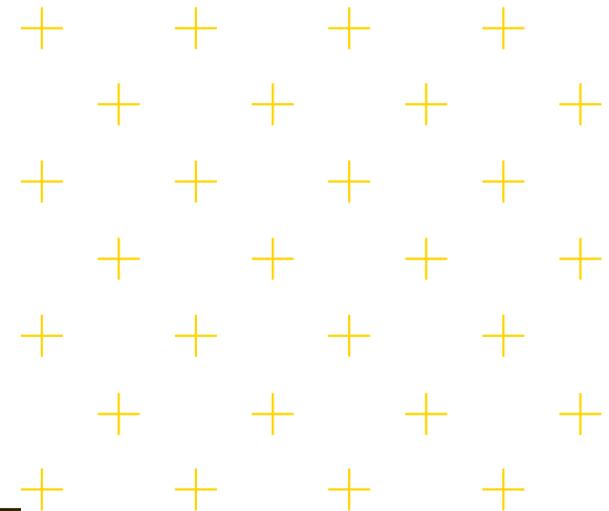

It's a challenge for any business.

To succeed you need a partner who'll stop at nothing to help you achieve your objectives. A partner who'll work with you to optimize your designs and produce the precision components you need at virtually any scale and to exacting quality.

More than this, you need a partner who can both streamline and accelerate the prototype-to-manufacturing process and also help you simplify the management of thousands of different components across your product portfolio.

And, of course, you need a partner with the backing and stability to help you mitigate risks across your supply chain.

With more than 100 engineers in over 20 facilities and more than 19,000 customers across 75 countries worldwide, MW Components is that partner.

The experience to make a difference

Our engineering experts have decades of experience creating high-quality precision components for demanding applications across multiple industries—from aerospace and electrical to automotive, industrial, and more. We've built up a bench-strength of knowledge spanning a wide range of materials, technologies, and applications.

It means that, while every challenge is different, chances are we've encountered something similar before.

The result? We can begin adding value from the very first conversation we have about your project. And, because we have both depth and breadth of engineering experience, we can

also bring insights and expertise from multiple industries, widening your perspective and offering solutions you may not have considered.

When you partner with MW Components, you can rely on us to add value at every stage—from initial design concepts and prototypes to final production at any volume. We apply the latest value engineering techniques to help you solve challenging product development problems. And our DFM expertise helps turn ground-breaking innovations into real-world commercial successes.

Ultimately, we're committed to becoming a valuable extension to your team.

Major industries served

Our engineers have experience across multiple industries including:

██████████

Agriculture

Automotive

Motorsports & Racing

Aerospace

Heavy Construction

Power Tools

Semiconductor

Electronics

Energy, Oil & Gas

Valves

Medical

Defense

Transportation

Heavy Truck & Bus

The scale to match your ambition

Whether you're developing new products, ensuring current capacity, or maximizing the uptime of existing equipment, you must be confident you can get the right components at the right time. You need to be sure the component manufacturer you work with has the expertise, systems, and capacity to deliver.

It's why so many leading manufacturers choose to partner with MW Components.

Our engineering teams are experts at manufacturing high precision components to virtually any scale. We have the systems and capacity to produce anything from a single part to tens of millions of units (and all points in between). And our industry-leading quality systems ensure we meet your specifications, every single time.

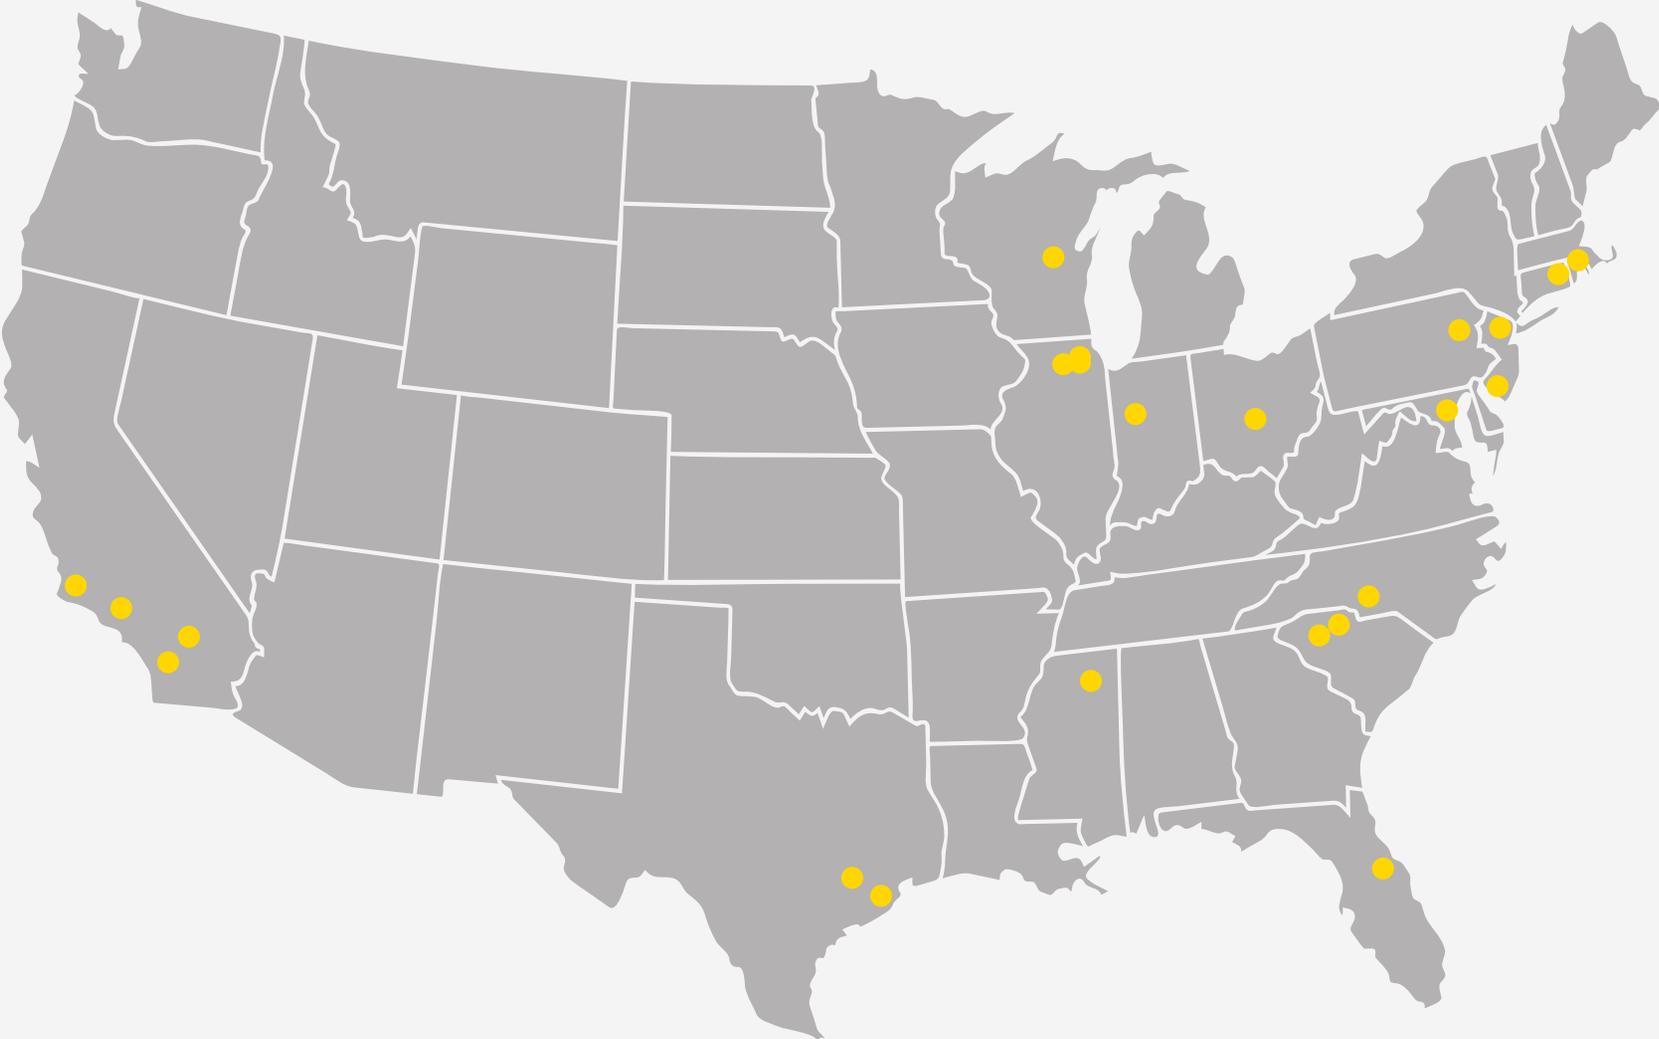

Of course, commercially successful products often lead to spikes in demand. Manufacturing delays, however, are simply not an option. That's why we ensure we can ramp production across multiple facilities, helping accelerate timelines and mitigate potential production risks.

When it comes to day-to-day manufacturing, no business wants to waste money on storage. With MW Components, our rapid production cycles mean we can deliver just-in-time fulfillment capabilities, freeing you from the need to hold large numbers of components in inventory.

And, beyond our custom manufacturing service, we also hold millions of standard components in stock for rapid delivery right when you need them.

It means that whatever the demands of your business and operations, you can trust us to deliver.

Over 20 facilities

Helping you manage complexity

Modern manufacturing is complex. Many products contain an almost bewildering range of individual components and assemblies. Magnify this across your entire portfolio and part inventory management can become a significant challenge.

In today's market, no manufacturer has time and money to waste juggling the sheer complexity of managing thousands of different components, often from multiple suppliers.

Fortunately, there is an easier, simpler, more cost-effective way.

With capabilities across an enormous range of different components, we can help you simplify the entire procurement and part management process. We can do this because we've streamlined every aspect of how manufacturers can manage their parts inventories with us.

It means you can consolidate your component supply chain, dealing with a single company across multiple parts. In doing so, you'll save time, lower your costs, and increase accountability. You'll deal with a single account team who understand your product portfolio and the needs of your business. And you can be sure we can deliver to the scale you need in the timelines you require.

Doesn't that sound like a better way to manage component complexity?

A woman with short dark hair, wearing safety glasses and a dark work shirt, is smiling as she works on a large, dark metal component in a factory setting. The background is filled with industrial equipment and a warm, orange glow from the lighting.

**Multiple products,
multiple processes,
near-total freedom**

With MW Components, you get access to a comprehensive portfolio of processes, materials, and expertise.

We're highly proficient in a wide range of manufacturing processes—from machining and wire forming to coiling and stamping.

We can produce high precision components in multiple alloys—from copper and steel to nickel, titanium, and specialty materials.

We create components for multiple applications—from springs, metal bellows and couplings to fasteners, shims and pretty much any custom part you can imagine.

The result? You can be sure that with MW Components you have a partner with the expertise, commitment, and capacity to deliver against your design objectives.

Committed to your success

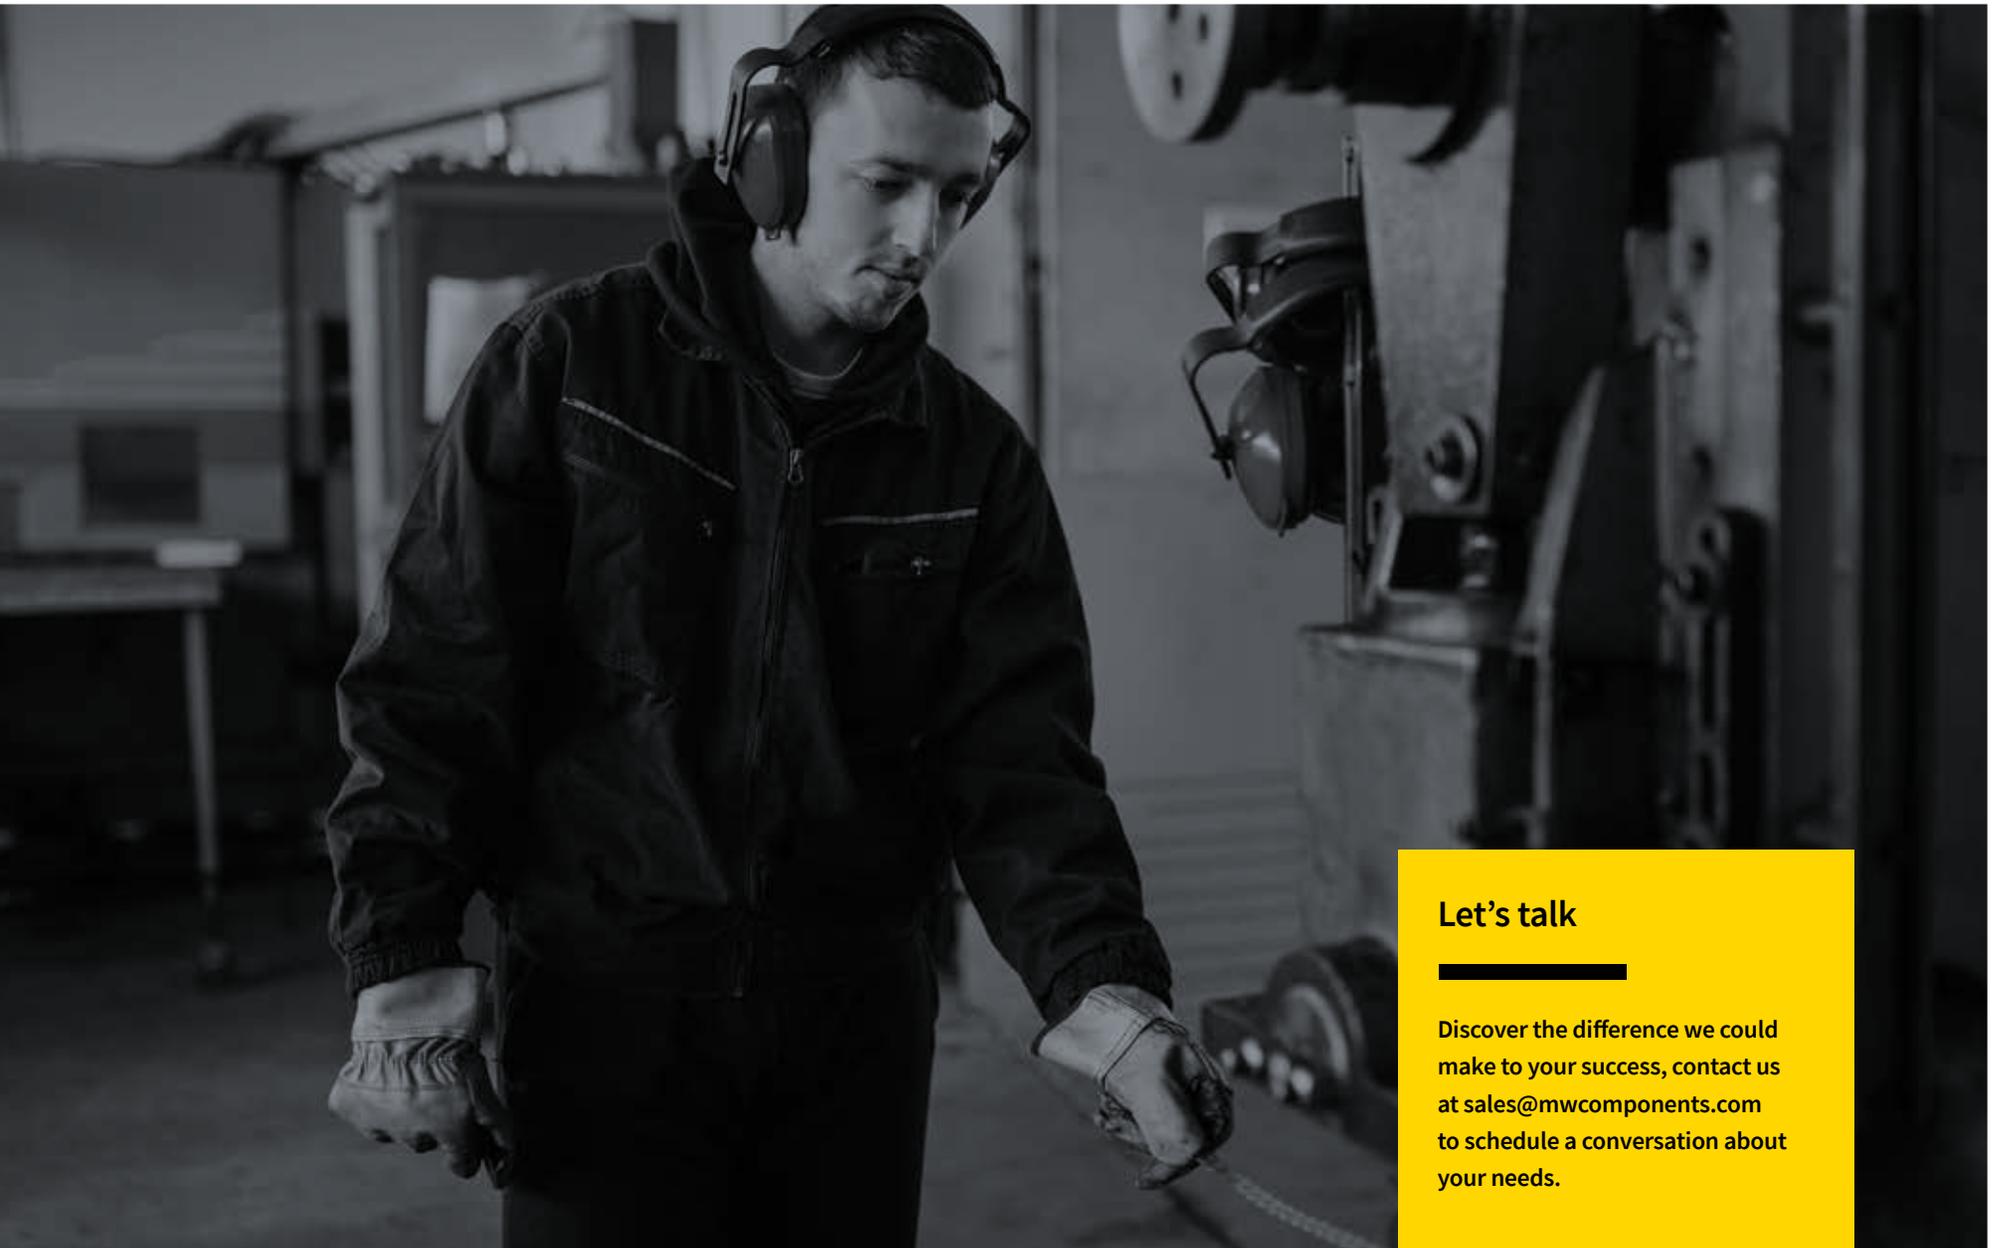

Producing world-class precision components is just one factor in why so many manufacturers choose to partner with us. Perhaps more important is our focus on doing whatever it takes to help our customers succeed.

We've invested in both talent and technology to deliver the levels of precision our customers need to the volume and scale their businesses require. Our 100+ engineers have deep technical knowhow spanning multiple applications and industries. And our systems are built to scale from a single prototype to a multi-million part production run.

We can do this because we have the financial backing to ensure we can meet (and typically exceed) our customers' demands day-in, day-out, year after year. It means they can be confident that we'll deliver what they need to meet the needs of their customers.

Today, every industry faces increased pressures. Competitor innovation is relentless. Customer expectations continue to rise. And ever-decreasing windows of opportunity make developing next-generation products at speed more imperative than ever.

Our mission is to help your business succeed—no matter how ambitious your aims or how tight your timelines.

MW Components

About MW Components

MW Components is focused on accelerating the entire process of delivering custom, stock, and standard parts to virtually any volume and against demanding deadlines. We work to highly complex tolerances. We help simplify the management of any number of different components. And we take a no-compromise approach to quality. With MW Components, you can be sure you'll get the right part to the right specification when and where you need it.

MW Components. Whatever it takes.
