

**ENGINEERED
PROFILES, LLC**
Better Profiles. Better Products.

For three generations, Engineered Profiles has been the source for OEMs and the production and supply of their extruded thermoplastic parts. Our reputation for strict tolerances, cost-effective production, and timely deliveries has helped us forge long-term partnerships with leading manufacturers. What's our secret? We're a privately held company committed to building relationships that last as long as our products do.

High Performance Plastic Extrusion Solutions

As a leader in the custom plastic extrusion business, we are the ideal solution for your next plastic extrusion project. Engineered Profiles has been delivering leading edge plastic extrusion solutions to a wide array of industries since 1947. Innovating proprietary advancements that include the first vinyl siding product made in the U.S., to dual and tri extrusion, custom coloring, and wood composite materials, Engineered Profiles has delivered value to each and every one of its customers across the globe. But what sets us apart is our people. Engineered Profiles' team of quality-obsessed professionals bring the focus and passion that make every project a success.

Our goal is to provide best-in-class extruded plastic products that exceed your expectations. We work hand in hand with your engineers to help design advanced solutions that differentiate your end product. At Engineered Profiles, our mission is simple... Better Profiles. Better Products.

✓ WHAT WE OFFER

Lean manufacturing

We fully embrace the principles of lean manufacturing to achieve and continually improve operational excellence. In this way, we are able to significantly improve quality and delivery, in a consistent and cost effective manner.

Tooling Innovations

Since Engineered Profiles' founding, our in-house tooling department has remained a cornerstone to support the tooling needs required by our customers. As we bring together engineering know-how with world class technology, every challenge, small or large can be solved.

Quality Assurance

Engineered Profiles is ISO 9001 accredited and has successfully maintained that status for over a decade. Using committed professionals and advanced technical equipment, we maintain unparalleled consistency during our manufacturing process. All of this delivers you the highest quality extruded profile possible.

OUR PEOPLE

Behind every unique design is a team of creative and highly technical professionals which bring material expertise, state-of-the-art processes and a commitment to continuous improvement that is second to none. You can count on the team at Engineered Profiles for your next project.

Raw Materials

The key to producing the highest quality plastic extrusion is the raw material that is sourced to produce it. As a turn-key extrusion manufacturer, we work side by side with you during the material selection process ensuring you the most cost effective, highest quality end product.

Plastic Extrusion Technologies

Engineered Profiles is equipped with a variety of proven plastic extrusion technologies and techniques that are carefully selected for very specific needs. This results in improved extrudability, using a lower cost material or incorporating several functions into one custom profile extrusion.

Fabrication Technology

Our expertise in in-line fabrication delivers numerous advantages and benefits to our customers. With some applications, moving to an out of line cell process is specified for a variety of reasons. Engineered Profiles will work closely with you to determine the most cost effective fabrication methodology for your next project.
