Data Quality Tools

Cloud-Based Software Platform to Improve Your Business Partner Master Data

CDQ's cloud-based **Data Quality Tools** enable fast and reliable analyses, validation, cleansing and enrichment of your business partner master data. The powerful software platform was developed in close cooperation of our team with well-known, internationally operating companies - the members of the CDQ Data Sharing Community. The various modules of the Data Quality Tools are constantly being adapted and further developed to meet the requirements of our customers.

You can use our Data Quality as a Service (DQaaS) software platform via web applications or fully integrated with your ERP or CRM systems.

135+ Mio
Data Records

___

The database of our Data Quality Tools contains over 135 million business partner records and is not limited to a specific country.

1,700+
#### Data Quality Rules

___

By matching against over 1700 Data Quality Rules, our Data Quality Tools ensure high reliability of our records. The data validation rules are developed together with our community members according to their requirements.

80+
Open Data Sources

___

Over 80 Open Data Sources are already integrated into our Data Quality Tools - and more are being added continuously.
In addition, there are further premium data sources available, for example D&B.
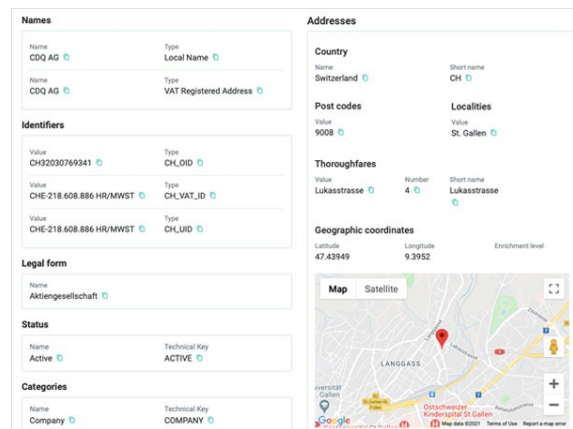

Golden Record

Cherry-Picking from a Broad Range of Data Sources

The CDQ Golden Record is the most complete and validated record composed of all internal and external data sources integrated into the CDQ Data Quality Tools.

Business Partner Lookup

Save Time in Creation of New Business Partners

Don't waste time collecting right information: The Business Partner Lookup tool within our data management software gives you instant results from various official open company registers and paid sources like D&B.

Data Mirror

Your Single Source of Truth for Master Data

The data mirror is a 1:1 representation of your data in our Data Quality Tools. The data mirror allows to bring together various databases spread throughout your enterprise. This is making it easier to validate, curate, consolidate, and enrich your data continuously, and to get transparency about the overall data quality of your business partner records.
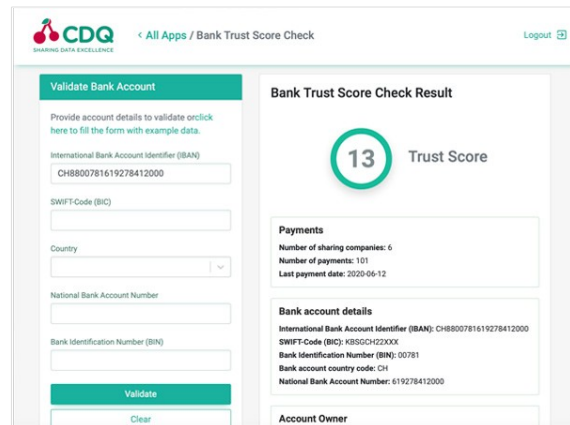

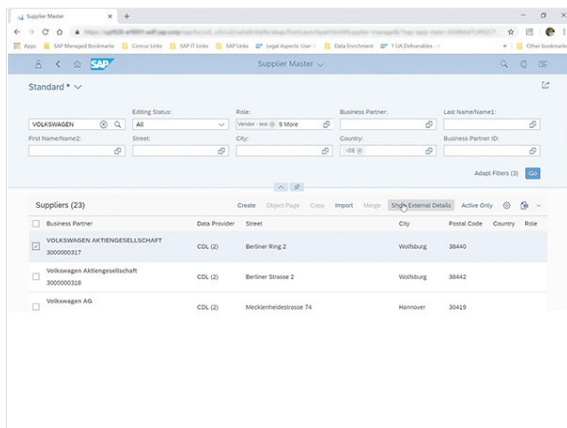

Bank Account Trust Score

Community-Based Protection Against Invoice Fraud

Changing bank accounts of business partners cause great challenges for companies, because they have to be checked manually in an elaborate way in order not to become a victim of a fraud attempt. The reliability of bank accounts is continuously rated by our member companies.

The trust score calculated from this is made available to the entire community.

Easy Integration

Import Your Data via Real-Time API Access

Our Data Quality Tools provide Data Quality as a Service via web applications or deep integration in your enterprise ERP or CRM system via real-time API access.

Import updated, cleansed, or enriched business partner data records directly without error-prone manual efforts!
