

Informed Consent for Voluntary COVID-19-Related Testing

You have asked to participate in a voluntary testing program (the “Testing”) offered by BASE10 Genetics, Inc. (“BASE10”). The Testing includes either or both of the following tests: (1) serology testing (the “Blood Test”), designed to detect antibodies for SARS-CoV-2, the virus that causes COVID-19, in the blood; (2) PCR testing (the “PCR Test”), designed to detect the antigen (virus) itself in secretions from the mouth or nose. The Testing will be used to help healthcare professionals make a return-to-work recommendation.

Please read the following information carefully and be sure you understand it before agreeing to participate in Testing.

I understand and agree to all of the following:

- I am at least 18 years old and am the person presenting for Testing.
- I have read and understand the information provided about the Testing. I have had the opportunity to ask questions, and all questions have been answered to my satisfaction.
- Testing is voluntary. There are alternative services, such as visiting my personal health care provider, an emergency room, or an urgent care facility. I choose to proceed with the Testing at this time.
- The PCR Test and the Blood Test work in different ways and provide different information:
- The PCR Test will help determine whether I am actively infected with the virus that causes COVID-19.
- The Blood Test will help determine whether I have been infected with the virus that causes COVID-19, and if so, how my immune system is responding and whether I have begun to recover. The Blood Test will not tell whether I am actively infected.

This information will be used to recommend whether and under what conditions I can return to work.

- The Testing does not treat any disease, illness, or condition, including COVID-19 infection or its complications.

- The Testing requires me to answer questions and provide information that test-site personnel cannot otherwise know (“Self-Report Information”). Providing inaccurate or incomplete Self-Report Information may mean that I receive an inappropriate return-to-work recommendation, regardless of the results of my blood test and clinical observations of me. My Self-Report Information is accurate and complete to the best of my knowledge and belief.
- The tests themselves are performed in different ways:
 - The PCR Test involves taking a sample of secretions from the mouth or nose and testing the secretions with a test kit <approved by the U.S. Food and Drug Administration under an Emergency Use Authorization>. I may be asked to spit into a sample container or testing personnel may brush the lining of my mouth or the inside of my nose with a cotton swab. The “swab” procedure may involve discomfort. I authorize collection of a secretions sample for the Testing.
 - The Blood Test involves a finger-stick blood test that conforms to the requirements of the U.S. Food and Drug Administration’s Emergency Use Policy. I authorize collection of a blood sample for the Testing.
- Results of the Testing may be positive, negative, or inconclusive.
- A positive test may confirm that I have been infected (Blood Test) or am actively infected (PCR Test) with SARS-CoV-2, and/or that I can transmit the virus to others.
- A negative result does not exclude the possibility that I have been infected (Blood Test) or am actively infected (PCR Test) with SARS-CoV-2, and/or that I can transmit the virus to others. I may still have been or be infected, and/or be contagious.
- An inconclusive result may occur for a variety of reasons including limitations of testing methods, poor sample quality, or my clinical status.
- As with any medical diagnostic test, inaccurate results (including those resulting from human error) may occur with the Testing, and may affect the appropriateness of the return-to-work recommendation. BASE10 does not represent or guarantee that the Testing will be error-free.

- Participating in Testing does not create a provider/patient relationship with BASE10. Testing does not replace care and treatment by my personal health care provider.
- I am responsible for forwarding my Testing results to my personal health care provider. If I have questions or concerns about my Testing or medical condition, I will consult with my personal health care provider and follow his or her recommendations. I will seek emergency care as needed if my condition worsens.
- I will not make medical decisions, delay seeking medical advice from my personal health care provider, or disregard such medical device based on information I receive as a result of the Testing or other BASE10 services.
- BASE10 may be required by law to report my Testing results to public health authorities. My consent is not required for this reporting.

I am responsible for checking my email for results notification and logging on to my BASE10 Patient Portal to view my Testing results when available.

If my Testing results are abnormal or indeterminate, a BASE10 Care Coordinator will try to contact me by telephone and/or letter, using the contact information I provide. Whether or not I connect with a Care Coordinator after my Testing, I am responsible for following up with my personal health care provider.

I understand that if I have any questions before or after Testing, I can email info@base10genetics.com and I will be connected with a member of the BASE10 Care Coordination Team, including a physician, if requested or as otherwise applicable. I understand and agree that I will direct general medical questions to my personal health care provider, and that asking questions about the Testing does not create a provider/patient relationship with BASE10.

I authorize BASE10 to use the email address and phone number I provided at the time I requested the Testing to contact me in connection with the Testing and the BASE10 Services. I am responsible for contacting BASE10 at the email address below to notify them of any changes to my mailing address, email address, phone number or other information that I provided.
